Walk on the Wild Side: Temporarily Unstable Paths and Multiplicative Sunspots

Written by Guido Ascari, Paolo Bonomolo and Hedibert Lopes, forthcoming in the *American Economic Review*.

We study how time variation in the expectation formation process can generate unstable dynamics of macroeconomic variables.

The majority of macroeconomic models relies on the hypothesis of rational expectations to focus the analysis on a unique *stable* equilibrium, while *unstable* equilibria are excluded a priori. This practice limits the ability of the models to describe the unstable behavior that the data often display, such as period of high inflation, or boom and bust episodes in asset markets. Then, we propose a generalization of rational expectations to allow for *temporarily unstable* dynamics.

We apply our approach to study the Great Inflation period in the US. Under our framework, in some periods inflation expectations are anchored to the target, in other periods they are more based on past information. When the latter situation occurs, the self-fulfilling nature of >>

Previous conferences

25-26 June 2018: "Ten Years after the Global Financial Crisis: What Have We Learned about Ensuring Financial Stability?"

Annual *International Journal of Central Banking* Research Conference
Hosted by De Nederlandsche Bank (DNB) in Amsterdam, The Netherlands, June 25-26, 2018.

The *International Journal of Central Banking (IJCB)* research conferences bring together leading economists from central banks and academic institutions to consider issues of critical importance for policymaking focusing on topics related to financial stability and monetary policy. The conference at DNB had three sessions. The first one was on *macro-prudential tools*, with

two presentations: "Calibrating Macroprudential Policy to Forecasts of Financial Stability", written by Scott Brave and Jose Lopez (both from the Federal Reserve Bank of San Francisco) and "Can Macroprudential Measures Make Cross-Border Lending More Resilient? Lessons from the Taper Tantrum" written by Előd Takáts (Bank for International Settlements) and Judit Temesvary (Board of Governors of the Federal Reserve System). The second session focused on *bank capital*. Three papers were presented. The first one was "Impact of Higher Capital Buffers on Banks' Lending: Evidence from Euro Area Experiments", written by Zymantas Budrys (European University Institute), Giuseppe Cappelletti (ECB), Áurea Ponte Marques (ECB) and Paolo Varraso (New York University). The second paper was "Are Basel's Capital Surcharges for Global Systemically Important Banks Too Small?", written by Wayne Passmore and Alexander H. von Hafften (both from the Board of Governors of the Federal Reserve System). The final paper in this session was "The Rise of Shadow Banking: Evidence from Capital Regulation", written by Rustom Irani (University of Illinois at Urbana-Champaign), Rajkamal Iyer (Imperial College London), Ralf Meisenzahl (Board of Governors of the Federal Reserve System) and José-Luis Peydró (ICREA-Universitat Pompeu Fabra). The last session was about *monetary policy and financial stability policy interactions* and contained two papers: "A Quantitative Case for Leaning Against the Wind" by Andrew Filardo and Phurichai >>

expectations leads to explosive dynamics. Moreover, this time variation in the expectation formation process yields drifting parameters and stochastic volatility. The empirical evidence suggests that the Great Inflation in the US can be explained by unstable dynamics. In our interpretation, the stagflation period in the Seventies is mainly caused by de-anchored drifting expectations.

Asymmetric Consumption Effects of Transitory Income Shocks

Written by Dimitris Christelis, Dimitris Georgarakos, Tullio Jappelli, Luigi Pistaferri and Maarten van Rooij, forthcoming in *The Economic Journal*

Using a representative survey of the Dutch population, this paper studies the empirical distribution of the marginal propensity to consume (MPC) in response to unexpected transitory income changes (positive and negative; small and large). The average MPC corresponding to non-durable consumption is between 15 and 25 percent (and between 35 and 50 percent when including durable expenditures). The MPC increases with the respondent's age and is larger at low levels of cash-on-hand. Most importantly, we find significant asymmetries between the MPC responses to positive and negative income changes. In particular, the MPC in response to a negative income shock is larger than the MPC in response to a positive shock. Furthermore, the size of the shock also matters, especially at low levels of cash-in-hand. For large positive unexpected changes in

Rungcharoenkitkul (both from the Bank for International Settlements) and "Coordinating Monetary and Financial Regulatory Policies" written by Alejandro Van der Ghote (ECB).

DNB governor Klaas Knot provided some opening remarks. He paid ample attention to the interactions between monetary and financial stability policies. He argued that although they are distinct policies, with distinct objectives and instruments, the relationship between these policies merits further research given our limited understanding of how they may interact, especially in the context of very accommodative monetary policies over a prolonged period. He discussed how monetary policy can have important effects on financial stability through its impact on risk-taking of the financial system as a whole. He also called attention to how changes in prudential policy may affect banks' risk-taking, their financing conditions, balance sheet composition and size, and hence, monetary transmission. Knot emphasized that monetary and prudential policies and their effectiveness should not be assessed in isolation, acknowledging that both can benefit from taking a systemic view in which the interactions are considered.

5-6 July 2018: "Sixth International Research Conference on Corporate Governance in Emerging Market"

De Nederlandsche Bank hosted the Sixth International Conference on Corporate Governance in Emerging Market on July 5 and 6, 2018. The conference was co-organized by the Institute of Governance and Organizational Responsibility (iGOR) at Groningen University and the Emerging Markets Corporate Governance Network (EMCGN) with support from European Investment Bank and NN Investment Partners. The aim of the EMCGN is to

promote the corporate governance policy agenda in emerging markets and transition economies. The Global Corporate Governance Forum (GCGF) at the International Finance Corporation (IFC) endorses and supports the Network.

The sixth conference focused on themes that were important to academics and practitioners interested in the role and effect of corporate governance in emerging markets and created a platform for research related discussions from both theoretical and policy perspectives. Academic researchers and policy makers from nineteen countries around the world gathered during this event. Twenty-three research papers were presented in seven thematically different sessions explore recurring issues in corporate governance research; such as governance in family-controlled firms, governance of financial institutions and related party transactions in controlled firms, as well as less studied topics such as the effect of board gender quotas on firm performance in an emerging market context. The conference was concluded with a panel discussion on a contested subject by governance practitioners; implementing Environmental, Social and Governance in emerging markets. The panel underlined the fact that more work on the role of corporate governance for environmental performance, and other social concerns, including poverty and inequality, would be very valuable.

The keynote speech of the conference was delivered by Simeon Djankov (Executive Director, Financial Markets Group Research Center, LSE; former Minister of Finance, Bulgaria). Djankov, in his speech on "The Future of Work in Emerging Markets: Governance and Finance Challenges", focused on how the nature of work is changing as a result of advances in technology. The main key points in Djankov's speech were as follows: A first priority should be significant investments in human capital throughout a person's lifecycle in this rapidly

income, consumers are more likely to overcome liquidity constraints and therefore the corresponding MPC is smaller than for small positive income shocks. The empirical estimates confirm results from a simple simulation analysis and are broadly in line with models of intertemporal choice with precautionary saving, borrowing constraints and finite horizons.

An important advantage of our survey design is that we are able to compare the responses to the hypothetical positive and negative income changes for the same household. Using the within-household MPC differences, we can classify households according to the predictions of economic models of consumption behavior. About four in ten respondents provide symmetric MPCs in response to shocks of different size and direction (as predicted by the permanent income hypothesis). Likewise, a four in ten respondents report asymmetric responses as predicted by models with liquidity constraints. And about a fifth of respondents display asymmetric MPCs that are inconsistent with these standard models and could be related to behavioral biases in decision-making or low financial sophistication.

Our research findings contain important lessons for predicting consumption responses to policy interventions that affect household incomes, such as changes in policy interest rates, tax reforms, money transfers and other redistributive policies. Our results suggest that the effects of a temporary policy intervention depend on the distribution of household resources, and that negative changes in income have more impact on consumption than positive shocks.

>>

changing environment. In addition to investments in human capital, the changing nature of work demands updates to social protection systems. Traditional provisions of social protection based on steady wage employment, clear definitions of employers and employees, as well as a fixed point of retirement become increasingly obsolete. Improved private sector policies to encourage startup activity and competition can also help countries to compete in the digital age. Djankov also stressed that governments will need additional revenues to fund the investments demanded by the changing nature of work.

The conference was a success to reach to the aim of the network as building global links, encouraging research collaboration and facilitating outreach. For the future of the conference series, Stijn Cleassens (the chair of the EMCGN) believes that there is still a need, however, to assure that research continues to improve and that research on individual countries is better disseminated to share methodologies and, to the extent possible, generalize lessons. In addition, while substantial reforms have taken place in many (developing) countries, the outcome of these reforms has not been yet fully captured by academic research.

Future conference

**21st Annual Research Conference
De Nederlandsche Bank
Amsterdam, 12-13 November 2018
UNCLOGGING THE CREDIT
CHANNEL**

MONDAY, 12 November 2018

8:45-9:30 Registration with coffee/
tea

9:30-9:45 Opening address:

Jan Marc Berk

(Division Director Economic Policy
and Research, DNB)

**SESSION I: (Un)conventional
monetary policy and credit
channel**

Chair: **Christiaan Pattipeilohy**
(DNB)

9:45-10:45 The signaling channel of
negative interest rates

Presenter: **Oliver de Groot** (DIW)

Discussant: **Paolo Bonomolo** (DNB)

10:45-11:15 Coffee break

11:15-12:15 Credit supply and demand
in unconventional times *Presenter:*

Sarah Holton (European Central
Bank) *Discussant:* **Ibolya Schindele**

(Central Bank of Hungary)

12:15-13:30 Lunch in Foyer

13:30-14:30 Keynote Address:

Simon Gilchrist (Boston University)

**SESSION II, Part 1: Credit market
frictions and debt-overhang**

Chair: **Andrea Colciago** (DNB)

14:30-15:30 The aggregate effects
of credit market frictions: evidence
from firm-level default assessments

Presenter: **Isabelle Roland**
(University of Oxford, LSE)

Discussant: **Vivien Lewis** (Deutsche
Bundesbank)

15:30-16:00 Coffee break

16:00-17:30 Policy Panel: **Simon
Gilchrist** (Boston University),

Atif Mian (Princeton University),

Leonardo Gambacorta (BIS)

Moderator: **Jakob De Haan** (DNB,
University of Groningen)

18:30-21:30 Conference Dinner (*by
invitation*)

TUESDAY, 13 November 2018

08:45-09:15 Registration with
coffee/tea

**SESSION II, Part 2: Credit market
frictions and debt-overhang**

Chair: **Andrea Colciago** (DNB)

09:15-10:15 Bank bailouts, debt-
overhang and macroeconomic
fluctuations

Presenter: **Mark Mink** (DNB)

Discussant: **Andrea Gerali** (Bank
of Italy)

>>

SESSION III: Expectations and credit cyclesChair: **Gabriele Galati** (DNB)

10:15-11:15 Default cycles

Presenter: **Wei Cui** (University College London)Discussant: **Francesco Zanetti** (University of Oxford)

11:15-11:30 Coffee break

11:30-12:30 Funding shocks and credit quality

Presenter: **Magdalena Rola-Janicka** (University of Amsterdam)Discussant: **Kalin Nikolov** (European Central Bank)

12:30-13:30 Lunch in Foyer

13:30-14:30 **Keynote speech: Atif Mian** (Princeton University)

14:30-15:00 Coffee break

SESSION IV: Macroprudential policies: bank and non-bank creditChair: **Aerdt Houben** (DNB)

15:00-16:00 The forced safety effect: how higher capital requirements can increase bank lending

Presenter: **Saleem Bahaj** (Bank of England)Discussant: **Caterina Mendicino** (European Central Bank)

16:00-16:15 Coffee break

16:15-17:15 Implications of shadow bank regulation for monetary policy at the zero lower bound

Presenter: **Falk Mazelis** (European Central Bank)Discussant: **Margarita Rubio** (The University of Nottingham)**DNB workingpapers**
