Special Issue of Journal of Financial Services

*Wilco Bolt, Nicole Jonker and
Carin van der Cruijssen-Knoben*

The Journal of Financial Services Research has published a special issue on "Retail Payments". This special issue includes research presented at the DNB conference "Retail Payments: Mapping Out The Road Ahead". The aim of this conference was to better understand the changing nature of the payment system and to discuss potential future developments and their implications. The articles in the special issue improve our understanding of behavior in the retail market. This is key information for policymakers charged with overseeing the development of retail payments. The special issue covers the following topics: social spillovers in consumers' security assessments of payment instruments, the effect of public campaigns on debit card usage, social ties and the demand for financial services, and consumer bank switching behavior.

Annual Conference 2017 De Nederlandsche Bank Amsterdam, 9-10 October 2017

On 9 and 10 October DNB organized its twentieth Annual Research Conference. This year the conference theme was "Fiscal and Monetary Policy in a Changing Economic and Political Environment". The conference featured keynote speeches by John Cochrane (Stanford University) and Nobel Prize winner Chris Sims (Princeton). Eight research papers were presented and a policy panel discussed the conference theme.

In his keynote speech John Cochrane questioned the validity of mainstream economic models because they fail to explain the current low and stable inflation. Whereas the Old Keynesian model predicts a deflationary spiral, the New Keynesian model predicts

multiple equilibria and therefore very volatile inflation. The Monetarist models, in contrast, predict hyperinflation due to the large expansion of central bank balance sheets. None of this was observed. John shows that the Fiscal Theory of the Price Level is able to explain the recent history of low and stable inflation.

Chris Sims reflected in his keynote speech on the experiences of the European Economic and Monetary Union. In his view, a key missing aspect is the orderly resolution of government defaults. Consequently, bankruptcies of a single country can threaten the existence of the entire monetary union. Reform of the

Eurozone is complicated by the fact that “we are discussing insurance after the house has burned down”. According to Sims, ex-ante risk sharing by means of, e.g., ESBies and fiscal backing of the ECB are important instruments that can facilitate an orderly resolution of sovereigns.

The presented papers all studied different aspects of fiscal and monetary policy interactions in the theoretical models we use. For example, Leopold Von Thadden (ECB) and Dennis Bonam (DNB) studied the stability of a monetary union conditional on switching between active and passive fiscal and monetary policy. Salvatore Nistico (Sapienza University Rome) analyzes theoretically when unconventional open-market operations by central banks affect output and inflation. Open-market operation are not neutral when treasury's support is absent or if the treasury is unable or unwilling to tax households to cover central bank's losses.

Dominik Thaler (Bank of Spain) shows that his model can explain the movement from a corridor system to a floor system by the size of the central bank balance sheet. Other topics that were presented dealt with the stability of equilibria when either

the government or central bank conducts regime switching policies (Guido Ascari, Oxford University) and the importance of agents' beliefs for sovereign debt limits and the effectiveness of monetary policy (Niccolo Battistini, ECB).

Florin Bilbiie (Paris School of Economics) and Markus Hagedorn (Oslo University) questioned some basic assumption in the mainstream models. Florin shows how results change when the consumption of hand-to-mouth consumers is not modelled as a fraction of total income in the economy as is generally assumed, but as a fraction of their own income. Finally, Markus offers a new perspective on price level determination by highlighting the role of incomplete markets.

Conference “Competition in Banking and Finance”

Groningen, 21-22 September 2017

On the occasion of the publication of the *Handbook on Competition in Banking and Finance* (Edgar Elgar Publishers), the two editors of this handbook, professor Laura Spierdijk and professor Jaap Bikker, organized a conference on this topic. This conference was co-organized and co-funded by the University of Groningen and De Nederlandsche Bank.

The first key-note speaker, professor Allen Berger, presented a comprehensive overview of the empirical research on the conference's topic during the last 50 years. This is an area to which he himself has provided many relevant contributions. Prof. Berger also visited DNB in the days before the conference.

The second key-note speaker, professor Sherrill Shaffer, provided an overview of the discipline from a different perspective, focusing on the theoretical assumptions underlying the measurement of competition. He also argued that “going back to the basics” is a powerful strategy to explain inconsistencies in empirical findings.

The third key-note speaker, professor Christa Bouwman, presented work in progress on “*Bank capital and bank stock performance*”.

Among the remaining presentations were chapters from the handbook, as well as stand-alone working papers on banking competition. Irina Stanga of DNB presented “*Bank competition and fragility: The role of non-core liabilities*”.

There were several participants from institutions such as the IMF, World Bank, Federal Reserve Bank, ECB, ACM, and SEC. Among the interesting presentations of these participants was the talk by Bastiaan Overvest from the CPB Netherlands Bureau for Policy Analysis entitled “Adapting conjectural variations methods to banking competition”. He started with the puzzling substantial mortgage interest

rate gap since the credit crisis between the Netherlands and various European countries such as Germany, Belgium and France. After a theoretical analysis, he drew the important conclusion that structural models to measure banking competition should carefully reflect the structure of banking markets.

The participants told us afterwards that they had enjoyed the conference on this specialized topic and suggested us to repeat this event on a regular basis. All presentations are available from Jaap Bikker.

Conferences

23 November 2017, Amsterdam International Conference 'Financial Consumer Protection, Financial Advice, and Changing Remuneration Structures in the Post-Crisis Era'

On Thursday 23 November 2017 the Groningen Centre for European Financial Services Law will hold an international conference on the topic 'Financial Consumer Protection, Financial Advice, and Changing Remuneration Structures in the Post-Crisis Era'. The conference will be hosted by the Dutch Authority for the Financial Markets (Vijzelgracht 50, Amsterdam) on the occasion of its 15th anniversary.

This interdisciplinary conference aims to explore the post-crisis legal regimes for the provision of financial advice in the EU and beyond as well as the actual and potential impact of such regimes on the behavior of consumers and financial advisors in financial markets. The conference will create a platform for the debate on this topic among leading legal scholars and economists, financial supervisors, legal practitioners, consumer associations, and the financial services industry. The key note will be given by prof. Niamh Moloney (London School of Economics and Political Science). Among the speakers are also prof. Femke de Vries (University of Groningen), prof. Genevieve Helleringer (University of Oxford), prof. Paolo Giudici (University of Bolzano), prof. Ian MacNeil (University of Glasgow),

prof. Diederik Bruloot (University of Gent), dr. Vera Angelova (Technical University of Berlin), dr. Fred de Jong (University of Amsterdam), prof. Hans-Martin von Gaudecker (University of Bonn), and prof. Steffen Meyer (University of Hannover).

Attendance of the conference is free of charge. However, you are kindly requested to register before 9 November 2017. Please note that places are limited. For more information, conference programme and registration, please see the [conference Link](#)

28-29 November 2017 CEP/DNB 'Central Banking and Green Finance.'

[Registration Link](#)

When the Leaders of the G20 met in China in 2016 they highlighted the necessity to scale up green financing. They also endorsed efforts to "provide clear strategic policy signals and frameworks" to target this objective. The question to what extent central banks can and should contribute to this momentum is moving up policy agendas worldwide.

Against this background, the Council on Economic Policies and De Nederlandsche Bank are organizing a workshop on "Central Banking and Green Finance". The event will convene researchers from academia, central banks, and other non-academic research institutions on November 28 (full day) and November 29 (morning), 2017 in Amsterdam, The Netherlands.

This workshop will focus on the following questions:

- What are current impediments in financial markets for a significant expansion of green finance? What are the levers within their mandates that central banks have to help overcome these impediments?
- What is the role of central banks and financial supervisors in the transition to a low carbon economy? How can these institutions best facilitate this transition?
- How do monetary policy instruments and financial regulation influence capital flows into different sectors? Through which transmission channels do these effects emerge? Are there sector biases in these effects?
- Are there alternatives to the current design of conventional and unconventional monetary policy instruments and financial regulation that would be better aligned with the goal of scaling up green finance? What are potential consequences of these measures for the effectiveness of monetary policy?
- What is the effect of green finance instruments (such as green bonds) on green investments? Specifically, what is the effect on the funding costs and the quantity of green investments?

The [full program](#) will be announced soon.

DNB working-papers

Since July 2017 the following Working Papers have been published, please use the following: [Link](#)

- **No 572** Contingent convertibles: Can the market handle them? Gera Kiewiet, Iman van Lelyveld and Sweder van Wijnbergen - 3 October 2017
- **No 571** Using debit card payments data for nowcasting Dutch household consumption Roy Verbaan, Wilko Bolt and Carin van der Crujisen - 3 October 2017
- **No 570** US monetary regimes and optimal monetary policy in the Euro Area Kostas Mavromatis - 25 September 2017
- **No 569** Herding behaviour of Dutch pension funds in sovereign bond investments Ian Koetsier and Jacob Bikker - 18 September 2017
- **No 568** Financial structure and macroeconomic volatility: a panel data analysis Emiel van Bezooijen and Jacob Bikker - 12 September 2017
- **No 567** Applying complexity theory to interest rates: Evidence of critical transitions in the euro area Jan Willem van den End - 4 September 2017
- **No 566** Central bank swap lines and CIP deviations William Allen, Gabriele Galati, Richhild Moessner and William Nelson - 14 August 2017
- **No 565** The effects of fiscal policy at the effective lower bound Dennis Bonam, Jakob de Haan and Beau Soederhuizen - 1 August 2017
- **No 564** Heterogeneity in house price dynamics Gabriele Galati and Federica Teppa - 1 August 2017
- **No 563** Payments data: do consumers want to keep them in a safe or turn them into gold? Carin van der Crujisen - 17 July 2017

- **No 562** Is fiscal policy in the euro area Ricardian? Nikki Panjer, Leo de Haan and Jan Jacobs - 17 July 2017
- **No 561** Does it pay to pay performance fees? Empirical evidence from Dutch pension funds Dirk Broeders, Arco van Oord and David Rijsbergen - 11 July 2017
- **No 560** Bank profitability and risk-taking under low interest rates Jacob Bikker and Tobias Vervliet - 11 July 2017
