## 6. Sample instances

For testing purposes, nine test instances with 0-values are included in this package.

## 7. DNB filing rules

The eXtensible Business Reporting Language (XBRL) specification provides a high degree of flexibility in the creation of XBRL instance documents. Part of this flexibility stems from the nature of the syntax: XML, and part stems from the XBRL specification itself.

The DNB filing rules represent a collection of additional rules and guidance specifically applicable to remittance of XBRL instances for regulatory filings of national taxonomies of DNB. These rules constrain the full flexibility of XBRL, to enable effective interaction between transmitter and recipient/consumer of regulatory reports.

The 1.0 version of the CRDIV FBO taxonomy will be checked against the 1.0 version of the DNB filing rules. These rules can be found under Downloads > DNB Filing Rules via <https://www.dnb.nl/statistiek/digitaal-loket-rapportages/algemeen/index.jsp>.
